Trail Photo-Op

PRETTY POLLINATORS

Native wildflowers in a variety of shapes, sizes, and colours can be seen all around the trails. These flowers are an important food source for the many pollinators found within our watershed.

Birds, bats, bees, butterflies, beetles, and other small mammals that pollinate plants are responsible for bringing us one out of every three bites of food.

They help sustain ecosystems and natural resources by traveling from plant to plant carrying pollen and helping plants reproduce.

We want to see your photos!

If you take photos while visiting one of our conservation areas, share them to social media and tag us!
